

Output4. ReactJS-HOL

Blogapp

Objectives

- **Understand the Need and Benefits of the Component Lifecycle:** Learn how the React component lifecycle manages the creation, updating, and removal of components, enabling efficient rendering and better application performance.
- **Identify Different Lifecycle Hook Methods:** Explore the various lifecycle methods provided by React, such as `componentDidMount()`, `componentDidUpdate()`, `shouldComponentUpdate()`, `componentWillUnmount()`, and `componentDidCatch()`, and understand their purpose in the component lifecycle.
- **Understand the Component Rendering Process:** Learn the sequence of steps involved in rendering a React component, from initialization and mounting to updating and unmounting, to understand how React efficiently updates the user interface.
