

Exercise 1: Parameterized Tests

1. Create EvenChecker.java

```
public class EvenChecker {  
    public boolean isEven(int number) {  
        return number % 2 == 0;  
    }  
}
```

2. Create EvenCheckerTest.java

```
import static org.junit.jupiter.api.Assertions.assertTrue;  
import org.junit.jupiter.params.ParameterizedTest;  
import org.junit.jupiter.params.provider.ValueSource;  
public class EvenCheckerTest {  
    private EvenChecker checker = new EvenChecker();  
    @ParameterizedTest  
    @ValueSource(ints = {2, 4, 6, 8, 10})  
    public void testEvenNumbers(int number) {  
        assertTrue(checker.isEven(number));  
    }  
}
```

Output:

Number 2 -> Passed

Number 4 -> Passed

Number 6 -> Passed

Number 8 -> Passed

Number 10 -> Passed

Tests run: 5

Failures: 0

BUILD SUCCESS
