

## Exercise 2: Test Suites and Categories

### 1. Create TestClass1.java

```
import org.junit.jupiter.api.Test;

public class TestClass1 {

    @Test

    void testOne() {

        System.out.println("TestClass1 Executed");

    }

}
```

### 2: Create TestClass2.java

```
import org.junit.jupiter.api.Test;

public class TestClass2 {

    @Test

    void testTwo() {

        System.out.println("TestClass2 Executed");

    }

}
```

### 3: Create AllTests.java

```
import org.junit.platform.suite.api.SelectClasses;
import org.junit.platform.suite.api.Suite;

@Suite
@SelectClasses({

    TestClass1.class,

    TestClass2.class

})

public class AllTests {

}
```

#### Output:

TestClass1 Executed

TestClass2 Executed

Tests run: 2

Failures: 0

BUILD SUCCESS
